

Week#10 Lab

CSC 111

Classes and Objects

Evaluation Question (Wednesday)

Q) Write a Java program to create a class called *Circle* with the following public attribute:

- double radius

Add two methods to the class:

- A method calculateArea(): This method should return the area of the Circle ($\pi \times \text{radius} \times \text{radius}$).
- A method displayRadius(): This method should print the radius of the circle to the console.

In the main method:

- Ask the user to enter the radius of the circle.
- Create an object of the Circle and assign the value to the attribute.
- Call both methods and display the result

Evaluation Question (Wednesday)

Sample Run

Enter the radius of the circle: 4.0
Radius: 4.0
Area: 50.26548245743669
