

Week#4 Lab

Arithmetic Operators, Operator precedence, Type Casting

CSC 111

Evaluation Question (Wednesday)

Write a program that calculates the average of three review scores for an item. The first reviewer bought the item, therefore, his review should be counted twice. Displays the result as a floating-point number and an integer.

Sample Run:

```
Enter 3 review scores: 5.5 8.25 7
```

```
Average = 6.5625, 6
```

Sample Run 2:

```
Enter 3 review scores: 9 6 5
```

```
Average = 7.25, 7
```
