

Week#5 Lab

Increment and Decrement

CSC 111

Evaluation Question (Wednesday)

Q) Write a Java program that prompts the user to enter the value of X and calculate the following equation:

$$result = \frac{++X * --X - --X}{(++X - --X) \frac{2X}{X}}$$

Convert the equation to valid Java code, then compare the results.
Then with pen and paper, try to solve it to understand how it was calculated.

Sample Run:
Enter X value: 11
The result is 61.0

X	result
11	61.0
13.5	91.625
20	200.5
32	512.5
-12	72.5
